# Data Transmission

# Networks

Computers conected together are said to be networked. There are two main types of networks:

## LAN

#### Local Area Networks

Where a number of computers are conected via a wireless conection.

All the machines tend to be geographically close together.

Hard wired using cable or wireless

### WAN

#### Wide Area Networks

e.g the internet. They all tend to be spread out remotley.

Uses public comunication techniques, e.g BT. Can be intercepted easier.
