

# Knowledge Based Systems

*Knowledge based software, or expert systems are designed to store vast amounts of data, about a particular topic, and then interrogate it so that sensible information can be gleaned from it.*

*The software will initially get the information from experts, and will then replace them where they are not available.*

*Expert Systems are used for:*

- *Medical Diagnostic*
- *Car fault diagnostic*
- *Plant recogniser*
- *Bank loan decisions*
